Maji Safi

BELIZE SPRING WATER

How Maji Safi can bring a named Belize spring to homes, resorts and visitors: the market, the money, the products and how we set up.

BZ$51M
spent on home water jars every year

0
spring water brands in Belize today

552K
visitors a year, 69% American

US$3.6M
a year in sales by year 5 at a 10% share (estimate)

In one line: a partner's spring, treated by our Safi Treatment systems, sold as 20 L jars and cans. Premium, sealed, named. For Amanuel, Mike and Sammy.

Draft for discussion · all numbers sourced in the data notes · estimates marked

PAGE 2 · BELIZE AT A GLANCE

A small country with a big visitor economy, next door to North America

397K
people · 110,719 homes

US$3.6B
GDP (2024), grew ~8% in 2024

60%
of foreign currency comes from tourism

552K
overnight visitors (2025)

967K
cruise visitors (2025)

2 : 1
BZ$ to US$, fixed · English-speaking

What drives the economy

- **Tourism:** the biggest earner, mostly Americans
- **Agriculture and fishing:** sugar, bananas, citrus, seafood (~8% of GDP)
- **Trade, transport, outsourcing**

What it means for us

- Visitors want premium water, often in cans
- US dollars and English make deals with North America easy
- Growth slowed in 2025, so prove demand first

Red: biggest city · Teal: main visitor island

SIB 2022 Census · US State Dept 2025 Investment Climate Statement · IMF Country Report 25/262 · BTB preliminary 2025 · Coface

PAGE 3 · WHAT PEOPLE DRINK AND WHAT SELLS MOST

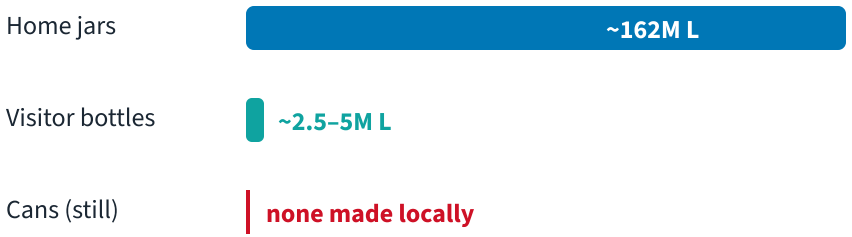

The 5-gallon jar is the volume. The small bottle and can are the margin.

What sells, by pack (our reading of the market)

PACK	WHO BUYS	TYPICAL PRICE	ROLE
5-gallon / 20 L jar	74% of homes, offices	BZ$6	**Most litres**
500 ml bottle	Shops, visitors, events	BZ$1–3	**Most units**
1 L · 1.75 L · 1 gal	Families, stores	~BZ$2–5	Take-home
Pouch (sachet)	Low-income, schools	BZ$0.25	**Being phased out**
Can	Resorts, bars, visitors	~BZ$4	**Premium, only imports**

Why people buy: 84% of homes have piped water, yet 74% buy what they drink, because E. coli shows up at home (33.7% of samples). **Sealed, named, tested water wins.**

Litres a year, by channel (estimate)

BZ$51M
home jar market a year

BZ$0.32
a litre in a jar, vs BZ$11 in an imported can

Jars carry the volume and repeat buyers. Cans and small bottles carry the price. We start with both.

PAGE 4 · WHO SELLS WHAT, AND WHO WE COULD PARTNER WITH

Everyone sells purified water. Nobody owns spring, and nobody owns the can.

BRAND	WHERE	PRODUCTS	WATER	PARTNER IDEA
CRYSTAL BY DASANI Bowen & Bowen · new name Oct 2026	National, 4 plants	500 ml · 1 L · 1.75 L · 1 gal · 5-gal jar · pouch	Double RO	Canning or distribution deal
Coca-Cola Bowen & Bowen	National	Soft drinks; 12 oz glass at BZ$1; line fills 22,000 bottles/hour	n/a	Price benchmark
ZETA	Belmopan, Corozal	5-gal jars · ice	RO + UV	Fill or deliver our jars
AQUATIC PREMIUM	Orange Walk	Jar delivery · ice	Purified	Northern delivery
AQUAZUL	To verify	5-gal jars · ice · delivery	Purified	Local route
BEL AQUA	Bluefield Foods	Purified water (since 2006)	Purified	Food distribution
AGUA DULCE	San Pedro	Purified water	Purified	Island distribution
FILTER PURE	National	Home and business RO systems	RO	Sell/service Safi Treatment
REFILL STATIONS	Grocery stores	Refill your own jar	Varies	Spring refill supply
IMPORTS	Visitor shops	Sparkling cans (e.g. La Croix ~BZ$4)	Imported	Shows can demand

OUR SPOT

The only named spring, in jars and cans.

The big signal: the market leader just rebranded to "Crystal by Dasani". Global brands see value here; a local premium spring is still open.

Partner, not fight: local jar plants already have trucks and customers. Our water and treatment make them better.

PAGE 5 · MAJI SAFI AS A WATER TREATMENT COMPANY

We design, build and run treatment, and we sell our own water

SAFIFLOW VENTURES GROUP

The parent company: water treatment technology. Design, build, install, service.

MAJI SAFI

Our water brand. Plant running daily in Kampala at ~6,000 L/h. Zero E. coli in accredited lab tests.

SAFI TREATMENT

Our system family: 10 modules, 500 to 20,000 L/h. Built to East African Standards (EAS 153, 39, 38).

All our treatment systems

SYSTEM	FLOW	PER DAY (10 H)	FITS BELIZE FOR
Safi S	500–1,000 L/h	5–10 m^3	A small pilot, a resort, a village
Safi M (our Kampala plant)	2,000–4,000 L/h	20–40 m^3	The first spring plant: jars + cans
Safi L	10,000–20,000 L/h	100–200 m^3	A national hub, if demand grows
Containerised	To design	To design	Shipped ready to run; remote sites

Small systems near customers, like our Kampala model, mean less trucking of heavy jars.

SIZE OPEN

What we can treat

Clean spring / town water
Filters › UF › UV

Iron and manganese
+ iron media

Rivers, cloudy water
+ chlorine

Fluoride
+ fluoride media

Salty water › salt membranes (then it is "purified", not spring)

For a spring: micron filters, then ultrafiltration (0.01 µm), then UV. Germs out, natural minerals kept, no chemicals.

PAGE 6 · WHAT WE SELL FIRST

Belize Spring Water in cans, and our 20 L jar with a new label

CANS · FIRST · FOR RESORTS, BARS, BOATS AND SHOPS

Deep blue **Clean white** **Sky blue**

JARS · FIRST · BOTTLE OPTIONAL

20 L jar (our real jar) **PET bottle (option)**

Jars, the Oasis and Primo way: dispenser at home, full jar swapped on a fixed day, ordered on WhatsApp.

Cans at the top of the market: sealed, no plastic bottle, made for visitors who pay BZ$4–6 a can. Deposit law already covers cans.

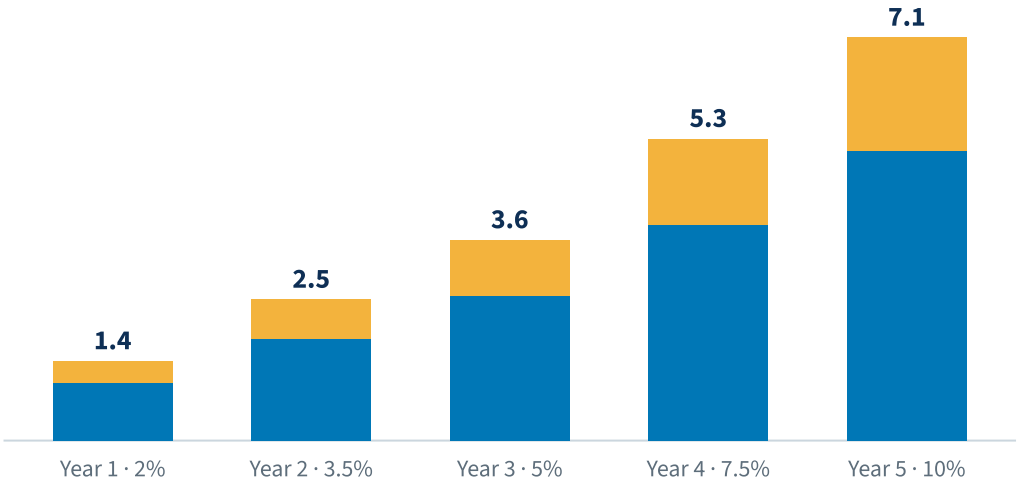

Brand: "Belize Spring Water" on cans; Maji Safi on jars, or one name for both DECIDE LATER

Cans: concept mockups · jar and bottle: real Maji Safi studio photos · models: Primo Brands (dispenser + exchange) and Oasis Water South Africa (refill + delivery subscriptions)

PAGE 7 · HOW MUCH IS POSSIBLE

From US$0.7M to US$3.6M a year in sales in five years, from one spring

Sales path (estimate, shelf prices, BZ$ millions)

■ Jars (homes) ■ Cans (visitors) % = share of homes and visitor-days

US$3.6M
a year by year 5 at a 10% share (BZ$7.1M)

+50%
on can sales if resorts pay BZ$6, not BZ$4: the high end

1 PLANT
a Safi M runs it: about 1 shift at year 5

Why people will buy: they already pay for water every week, and nobody offers a named spring or a still-water can.

Capture the high end: resorts, dive lodges, villas, US visitors (69%). Premium price, small volume, strong brand.

Upside not counted: export to US buyers, hotel own-label, refill stations, offices. Costs: estimate prepared with Mike.

Estimates: jars = 82,264 homes × 2/week × 52 × BZ$6 × share; cans = 551,698 × 9 nights × share × BZ$4 · BZ$2 = US$1 · before costs · not a forecast

PAGE 8 · HOW WE SET UP AND THE STORY WE TELL

A North American deal desk, a Belize spring, and water that gives back

THE DEAL (MY THINKING)

A **North American company** handles the deals and the Belize brand: that side of the world knows how North America works. Ownership **open for discussion**.

Who brings what

Maji Safi: treatment, plant, operations
Belize partner: spring and land
Investor: funds the build
Mike: leads the Belize side

Moving parts

Investment: find who partners and funds it

Tests: spring lab tests (wet and dry season) and flow

Cost analysis: machines, site, cans, jars, with Mike

Logistics: shipping, site, roads, power

Permits: water licence, BZS 10, company

Impact stories

One can, one day of school water. Every can funds a day of safe drinking water for a child at school in Africa, through Maji Safi's community water work.

Taps for Belize schools. Only 58.3% of Belize schools have drinking water. Part of every jar fixes that.

Refill, not plastic. Plastic is 67% of Belize litter; one jar is refilled again and again.

Local jobs at the plant, on routes and in sales.

Next: 1 · Spring test + site visit → 2 · Costs + logistics → 3 · Partners + investors → 4 · Launch jars + cans
