PARTNERSHIP PROPOSAL
DRAFT FOR DISCUSSION

Prepared by Maji Safi
Safiflow Ventures Group Ltd
Kampala, Uganda

Maji Safi

BELIZE · SPRING WATER

A Belize spring, made into water people trust

One way to approach the project: the market, the opportunity, and a first step that partners can agree on together.

October 2026

Confidential · for Mike and partners

THE AIM

The aim is one decision: to start a joint test of the spring, so every later choice rests on facts

> **The first step proposed:** a site visit by Maji Safi engineers, lab tests in the wet and dry seasons, and a weekly flow log through the dry season (February to May). If the water and the flow hold up, the partners decide on the build.

WHAT EACH PARTNER GETS OUT OF IT

Belize partner

- The spring becomes a certified, branded water business on his land
- An operator that already runs a plant
- A stake in the business, to agree

Mike

- A clear, sourced case to bring to his partners and investors
- A defined first step he can lead
- The bridge between Maji Safi and Belize

Maji Safi

- A first project outside East Africa
- Safi Treatment proven in the Americas
- An operating role and a stake, to agree

Investors (later)

- Proven water, flow and demand before money goes in
- A named spring with a defensible story
- A team that has built and run a plant

EXECUTIVE SUMMARY

Belize already pays for its drinking water. No one sells it a spring.

#	FINDING	WHAT IT MEANS
1	**The habit exists**	74.3% of homes drink bottled or purified water, even though 83.8% have public piped water. Demand doesn't have to be created.
2	**Trust is the gap**	The 2025 national survey found E. coli in 29.8% of samples at collection and 33.7% where water is drunk, mostly from storage and handling. Sealed, tested water with a clean dispenser service answers it.
3	**The market is all purified**	One national leader (Crystal, Bowen & Bowen) and a tail of local RO plants. No named spring water and no still water in cans were found.
4	**Visitors bring spring habits**	551,698 overnight visitors in 2025, 69% from the US, where bottled water is the No. 1 drink and regional spring brands built the largest bottled water company.
5	**Size is set by the spring**	Serving 5% of buying homes takes about half a shift of one 6,000 L/h plant. The limit is dry-season flow, so testing comes first.

Proposed approach: spring water in 5-gallon jars with dispenser delivery first, cans for resorts and visitors second, small PET as an option on the same filler. Start with a joint test of the spring.

OUR POSITION

Maji Safi enters Belize as a treatment company that runs its own water brand

HOW THE GROUP FITS THE PROJECT

PART OF THE GROUP	WHAT IT IS	ROLE IN BELIZE
Safiflow Ventures Group	The parent: a water treatment technology company that designs, builds, installs and services systems	Technology partner and operator
Maji Safi	Our drinking water brand, produced daily at our Kampala plant	The proof, the jar and delivery model, and one brand option
Safi Treatment	Our system family: 10 modules, 500 to 20,000 L/h	The treatment line at the spring

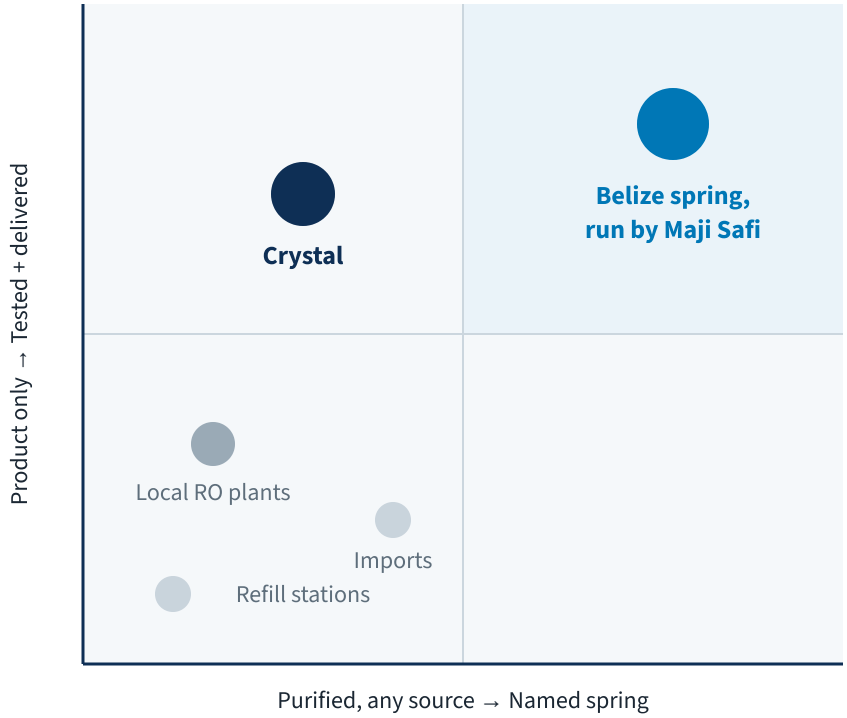

What we are

- A treatment partner that also operates
- Builders of our own systems
- Runners of a jar business

What we are not

- A borehole driller or pipe layer
- A franchise kiosk chain
- A reseller of imported water

EXHIBIT 1 · WHERE THE OFFER SITS IN THE BELIZE MARKET (OUR READING)

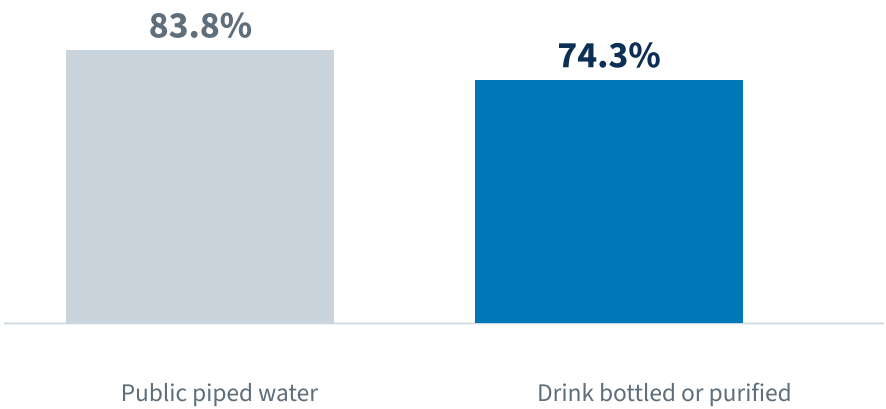

Placement is Maji Safi's qualitative reading of public information, not measured data.

Source: Safiflow Company Profile; Safi Treatment Technical Data Sheet SF-TDS-001

1 · THE MARKET

Most homes have the tap, yet three in four buy their drinking water, because trust breaks at home

EXHIBIT 2 · SHARE OF BELIZE HOUSEHOLDS, 2022

Source: SIB, 2022 Population and Housing Census

EXHIBIT 3 · HOUSEHOLD WATER SAMPLES WITH E. COLI, 2025

Source: SIB, MoHW and BWS joint statement on MICS7, Nov 2025. Also found in purified water from dispensers.

397,483
people, 2022 Census

110,719
households, 2022 Census

551,698
overnight visitors 2025, 69% from the US

~28%
of overnight visitors stay in San Pedro

Sources: SIB 2022 Census; Belize Tourism Board preliminary 2025; San Pedro Sun

2 · COMPETITION

One national leader and a long tail, all selling purified water

EXHIBIT 4 · MAIN SELLERS OF DRINKING WATER IN BELIZE

BRAND	WHERE	WATER	STRONG HOLD
Crystal Bowen & Bowen	National, 4 plants	Double RO	Most trusted name; shares trucks with Coca-Cola, which Bowen bottles
Zeta	Belmopan, Corozal	RO + UV	The capital and the north; ice
Aquatic Premium	Orange Walk	Purified	Home and office delivery
Aquazul	To verify	Purified	Jars, ice, delivery
BEL AquA Bluefield Belize Foods	To verify	Purified	In the market since 2006
Agua Dulce	San Pedro	Purified	On the main visitor island
Filter Pure Solutions	National	Home RO	Lets homes stop buying jars
Grocery refill stations	Most towns	Varies	Cheapest litre; quality not audited

Sources: bowen.bz; crystalwaterbelize.com; 7News Belize (2016 BZ$40M Bowen facility); business directories (Find Yello, Find Glocal), to verify on the ground

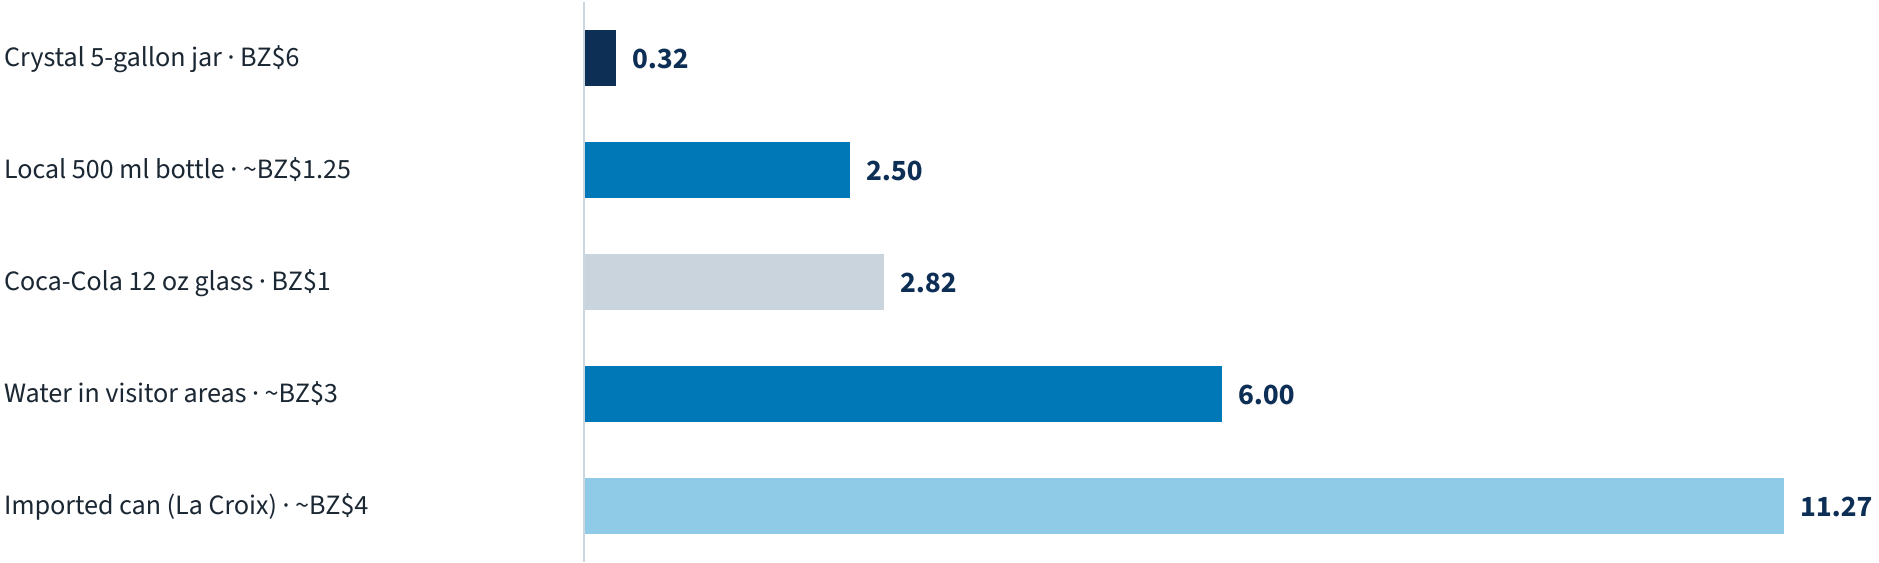

EXHIBIT 5 · WHERE PLANTS ARE

2 · COMPETITION

The jar is the cheapest litre in Belize; the can is the dearest

EXHIBIT 6 · PRICE PER LITRE TO THE BUYER, BZ$ (BZ$2 = US$1)

Jars: compete at Crystal's BZ$6 and win on spring, proof and reliable delivery.

Cans: sell where buyers already pay BZ$6 to BZ$11 a litre: resorts, bars, tour boats.

Sources: San Pedro Sun (Crystal 5-gal, Aug 2024); Love FM (Bowen prices); Numbeo, Hikersbay (2025–26 averages); Luna Realty (Ambergris, 2022). A shelf audit in Belize will confirm.

3 · THE OPPORTUNITY

Spring water is a named place; purified water is a process. Belize has only the second.

EXHIBIT 7 · HOW SPRING WATER DIFFERS

	SPRING WATER	PURIFIED WATER
Source	One underground source that flows naturally to the surface	Any source, including the tap
Label	The spring's location must be identified	No source named
Minerals	Natural minerals stay	Mostly removed by RO
Treatment	Light: filters, ultrafiltration, UV	Heavy: often double RO
In Belize	**None found**	Every brand

Sources: US FDA 21 CFR 165.110 (spring water definition); Belize standard BZS 10:2002 covers spring and purified water

EXHIBIT 8 · WHAT SPRING WATER BUILT IN THE US

US$6.66B

2025 net sales of Primo Brands, the largest US branded bottled water company, built on regional spring brands: Poland Spring, Arrowhead, Deer Park, Ozarka, Zephyrhills

16.4B gal

US bottled water in 2024, the No. 1 drink by volume for the ninth year running

Sources: Primo Brands 2025 Annual Report; IBWA citing Beverage Marketing Corp.

4 · THE APPROACH

Jars carry the business, cans carry the brand, and one light treatment line serves both

First · Spring water jars

5-gallon jars with a dispenser and fixed-day delivery for homes and offices. 82,000 homes already buy weekly. Priced at the BZ$6 people know.

Second · Cans

Still spring water for resorts, bars, tour boats and visitors. No plastic bottle; the Returnable Containers Act already covers cans.

Option · Small PET

On the same filler as the cans, only where buyers ask for it.

EXHIBIT 9 · SAFI TREATMENT LINE EXPECTED FOR A SPRING (FINAL MODULES SET BY THE LAB TEST)

Added only if the test shows the need: M2 iron and manganese, M3 carbon, M7 fluoride. M8 salt membranes would make the product purified, not spring. Always on: M9 cleaning and M10 Smart Controller. No chemicals in the drinking water. Built to East African Standards (EAS 153, 39, 38); accredited lab tests show zero E. coli at our Kampala plant.

Source: Safi Treatment Technical Data Sheet SF-TDS-001; Chemiphar reports May and Sept 2026

4 · THE APPROACH

Five homes in a hundred fill half a shift of one plant; the spring sets the ceiling

EXHIBIT 10 · FROM POPULATION TO PLANT LOAD, JARS ONLY (ILLUSTRATIVE 5% SHARE)

110,719	→	82,000	→	4,100	→	1,370	→	26,000
homes in Belize		buy their water (74%)		homes at a 5% share		jars a day, 2 a week		litres a day

~4.5 hours

of one 6,000 L/h treatment plant a day; cans fit in the rest

~23 L/min

of spring flow needed for the jars alone, which is why the dry-season flow is measured before anything is sized

Logic: 5-gallon jar = 18.9 L; 6 delivery days a week; 25% extra water for rinsing and filtration. Sources: SIB 2022 Census. Illustrative, not a forecast.

5 · THE PATH

Five steps, each one decided on facts from the step before

EXHIBIT 11 · PROPOSED SEQUENCE

STEP	PHASE	WHAT HAPPENS	LED BY	MOVES ON WHEN
1	**Locate**	GPS pin, land title, photos, any past water records	Belize partner, Mike	Site documented
2	**Test**	Site visit; accredited lab panels in the wet and dry seasons	Maji Safi engineers	Water fits the spring standard
3	**Measure**	Weekly flow log, February to May	Belize partner's team, our method	Dry-season flow covers the plan
4	**Agree and permit**	Partnership terms, land and water licence, BZS 10 path, cost estimate prepared with Mike	All partners, Belize counsel	Terms signed; investor joins
5	**Build and launch**	Plant and lines; jars in one district first, then cans	Maji Safi, operating company	Homes reorder; next district

Steps 2 to 4 run side by side. Nothing is built until the water and the flow are proven.

6 · THE PARTNERSHIP

What each partner brings

Maji Safi

- Water testing and treatment design
- Safi Treatment systems, installed
- Plant set-up, training and operations
- Jar and delivery know-how
- Mike leads for us

Belize partner

- The spring and the land
- Further role: to agree together

Investor

- Joins once the water and flow are proven
- Funds the build

To set up together: a site to work from for the plant, storage and loading; investment to set up the plant and lines; a cost estimate, prepared with Mike.

Brand, two options: Maji Safi Belize, or a new Belize spring name, “Operated by Maji Safi”. Chosen after trademark checks.
